Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

1-145. Claims 1-48, drawn to a method of detecting the presence of a target nucleic acid by using an enzyme comprising residues 300-650 of SEQ ID NO:1 or the 144 sequences listed in claim 34, classified in class 435, subclass 6. The group number corresponds to the SEQ ID NO.

146-2208. Claims 46-48, drawn to a kit comprising oligonucleotides of SEQ ID NO:709-2640, 169-211 and 619-706, classified in class 536, subclass 23.1. The group number corresponds to the SEQ ID NO.

2209. Claim 49, drawn to a method for detecting the presence of a two or more target nucleic acid, classified in class 435, subclass 6.

Claims 1-48 are generic to a plurality of disclosed patentably distinct species comprising the oligonucleotides of SEQ ID NO:709-2640, 169-211 and 619-706. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The inventions are distinct, each from the other because:

The enzymes of Groups 1-145 are structurally different proteins and are therefore patentably distinct. The oligonucleotides of Groups 146-2208 are structurally different nucleotides and are therefore patentably distinct.

Art Unit: 1652

The method of Group 2209 involves the detecting of two or more target nucleic acids and is therefore different and patentably distinct from the method of Groups 1-145 that are drawn to the detecting of one target nucleic acid.

Because these inventions are distinct for the reasons given above, and the search required for one sequence is not required for another sequence and the inventions have acquired a separate status in the art as shown by their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles L. Patterson, Jr., PhD, whose telephone number is 571-272-0936. The examiner can normally be reached on Monday - Friday from 7:30 to 4:00.
